THE STATE OF FOOD AND AGRICULTURE

MOVING FORWARD
ON FOOD LOSS AND
WASTE REDUCTION

2019

THE STATE OF FOOD AND AGRICULTURE

MOVING FORWARD ON FOOD LOSS AND WASTE REDUCTION

Food and Agriculture Organization of the United Nations
Rome, 2019

CONTENTS

FOREWORD

METHODOLOGY

ACKNOWLEDGEMENTS

ACRONYMS AND ABBREVIATIONS

EXECUTIVE SUMMARY

CHAPTER 1

FOOD LOSS AND WASTE – FRAMING THE ISSUES

Key messages

Food loss and waste and the Sustainable Development Goals

What is food loss and waste? A conceptual framework

How much food loss and waste occurs?

Why is food lost or wasted?

Why do we need to reduce food loss and waste?

Scope and structure of the report

CHAPTER 2

MONITORING FOOD LOSS AND WASTE ALONG FOOD SUPPLY CHAINS

Key messages

Moving beyond the global estimate to a more comprehensive analysis of food loss and waste in food supply chains

Variation in food loss and waste along food supply chains – results of a meta-analysis

The identification of critical loss points

Challenges of data collection

Conclusions

CHAPTER 3

REDUCING FOOD LOSS AND WASTE – THE BUSINESS CASE AND BEYOND

Key messages

The private and societal benefits and costs from reducing food loss and waste

The business case for reducing food loss and waste – opportunities, costs and barriers

The economic case for reducing food loss and waste – from private to public interest

Winners and losers in food loss and waste reduction

Public-sector intervention on food loss and waste reduction

Conclusions

CHAPTER 4

FOOD LOSS AND WASTE AND THE IMPLICATIONS FOR FOOD SECURITY AND NUTRITION

Key messages

Food loss and waste and its links to food security and nutrition

Food loss and waste and the impact on food security and nutrition

Food loss and waste reduction and the importance of location

Food loss and waste reduction and levels of food insecurity

The relative (cost-)effectiveness of food loss and waste reduction in improving food security and nutrition

Conclusions

CHAPTER 5

FOOD LOSS AND WASTE AND ENVIRONMENTAL SUSTAINABILITY

Key messages

Food loss and waste reduction and environmental sustainability

Food loss and waste reduction and the environment – key questions and considerations

Quantifying the environmental impacts of food loss and waste

From potential to actual impact on natural resource use and GHG emissions – the role of prices

Food loss and waste reduction in the broader context of sustainability – comparative effectiveness and trade-offs

Conclusions

CHAPTER 6

POLICYMAKING FOR FOOD LOSS AND WASTE REDUCTION – GUIDING PRINCIPLES

Key messages

Enabling private actors to reduce food loss and waste

Public interventions for better food security and nutrition and environmental sustainability

Public interventions in practice – linking policy objective and entry point along the food supply chain

Ensuring coherent policies for food loss and waste reduction

Towards better data on food loss and waste – a road map

Conclusions

TABLES, FIGURES AND BOXES

TABLES

1 Prevalence of food insecurity (percentage of total population) by FIES category and income group, 2016

2 Examples of interventions towards food loss and waste reduction around the world

FIGURES

1 Food loss and waste and the Sustainable Development Goals

2 A conceptual framework for food loss and waste (FLW)

3 Food loss from post-harvest to distribution in 2016, percentages globally and by region

4 Food loss from post-harvest to distribution in 2016, percentages by commodity groups

5 Potential direct causes and indirect drivers of food loss and waste

6 Range of reported food loss and waste percentages by supply chain stage, 2000–2017

7 Range of reported food loss and waste percentages at the wholesale and retail stage, 2001–2017

8 Range of reported food waste percentages at the consumption stage in Northern America and Europe, 2012–2017

9 Heat map of food loss studies by region, 1990–2017

10 Potential private and broader societal benefits and costs of food loss and waste (FLW) reduction

11 The potential interactions between food loss and waste and the dimensions of food security

12 Potential price and income effects of food loss and waste reductions at various points in the food supply chain

13 Relative contributions of the main food groups to overall food loss and waste and their carbon, blue-water and land footprints

14 Relative contributions of regions to overall food loss and waste and their carbon, blue-water and land footprints

15 Overview of the main results of FAO's Food Wastage Footprint study, 2013

16 Carbon impact of food loss and waste reduction along the food supply chain

17 Objectives of loss and waste reduction measures and their entry points along the food supply chain

A1 Wheat production and losses in tonnes estimated applying constant losses of 15 percent factor

A2 Graphical representation of the model

BOXES

1 Definitions related to food loss and waste

2 The Food Loss Index methodology in a nutshell

3 FAO's earlier estimate of food loss and waste – how is it different from the FLI?

4 Measuring food loss in physical, caloric or economic value – does it matter?

5 Definitions of market failure, externality, public good and missing market

6 FAO's meta-analysis of existing studies into food loss and waste – methodology

7 How to interpret the graphs in Figures 6, 7 and 8

8 Farmer-reported causes of on-farm losses of staple crops

9 Indirect drivers of on-farm losses of staple crops

10 Refrigerated warehouse capacities and needs around the world

11 Reducing fruit and vegetable losses during transportation

12 FAO's Save Food case studies on critical loss points for crops, milk and fish

13 A financial cost–benefit analysis of post-harvest loss reduction for maize in the United Republic of Tanzania

14 Promoting mud silos to reduce maize losses during storage – evidence from Northern Ghana

15 The business case for reducing food loss and waste – a survey by Champions 12.3

16 The business case for reducing food loss and waste – a study by ReFED

17 Quantifying the economic gains of food loss and waste reduction – the ReFED study

18 The “Love Food, Hate Waste” campaign

TABLES, FIGURES AND BOXES

19 Providing information and training – the case of tomatoes and milk in Rwanda	62	26 The most common environmental footprint indicators for food loss and waste	91	32 Food waste reduction campaigns – China, Turkey, North Macedonia and Denmark	113
20 Public–private partnerships for food loss and waste reduction in APEC countries	64	27 Environmental footprints of food production along the supply chain – the case of maize	98	33 Reforming bread subsidies in the Near East	114
21 Food security – key definitions	69	28 The impacts of a 25 percent reduction in global food losses on agricultural land use and GHG emissions	103	34 Regional strategic frameworks to tackle food loss and waste effectively	120
22 The Malabo Declaration and the prevention of post-harvest losses	73	29 Water use in the production of mangoes in Australia – targeting resource use efficiency versus actual water use	105	35 Reducing food loss and waste in the European Union	121
23 The impacts of food loss on micronutrient deficiencies in children under five	78	30 Financial and economic assessment of clean-energy technologies in the milk supply chain	107	36 A road map for improved data collection on food losses	122
24 Gender relations influence food safety and food losses – the case of rural Ethiopia	79	31 The environmental performance of packaging to reduce food loss and waste	108		
25 The impacts of a reduction in food losses at the primary production and food processing stages on food security and nutrition	82
